

## 2 Professors Study Uses of Live TV

By MARC LIPSCHER

A preliminary study of the educational uses of live television, which could lead to the construction of a million dollar classroom television system at Columbia, is currently being conducted by two members of the faculty of the School of Engineering and Applied Sciences, one of the two revealed yesterday.

The study is being done by Professor of Nuclear Science Leon J. Lidofsky and Associate Dean for Academic Affairs Ralph J. Schwarz and, according to Professor Lidofsky, will probably result in the two being granted a \$20,000 research project this winter.

The professor asserted, "If we had the results of the (research project) report now, and the results were favorable, I'd guess the (million dollar) program could go into effect no earlier than one year but no later than two years from now."

The cost of a television system would probably be paid by off-site people such as local industry, rather than by the university itself. Dr. Lidofsky stated.

At the moment, nothing that we are doing involves any large sums of money," he noted.

Professor Lidofsky said \$20,000 will be needed for research on the planning of the system. Obtaining the funds will be a problem,

but I do not think that it is insurmountable for the funds could be sought from foundations," he explained.

When the preliminary study is completed sometime during the winter, its findings will be turned over to Engineering Dean Wesley Hennessy and Executive Vice President for Academic Affairs Wm. Theodore de Bary, he added.

He noted that during off hours the (television) system might be used by the public for training teachers and firemen, and for speedwriting and stenography courses.

The possibility of the engineering school using educational television was discussed in a report last year by an engineering faculty on future aims and goals of the school.

Dr. Lidofsky noted, however, that an earlier source of the idea was a trip he and Dean Schwartz made to Stanford and Southern Methodist Universities.

At those universities, the professor said, a number of courses are presented on live television. Students in such courses opt either to sit in class and participate in person, or watch and listen to a television monitor and participate via microphones or telephones.

At SMU, the system is available in every graduate course at the school of engineering," Dr. Lidofsky explained.

We spoke to random students at SMU and Stanford, and almost every student we spoke to responded favorably.

In fact, some students of large lecture classes reported that they saw their professor more often than they normally would have," he stated.

Such additional contact was made possible by mandatory student-instructor conferences, the professor noted.

## Community Board Presents Charges Against CEEP Head

By GAIL ROBINSON

A community group has written a letter to President McGill listing charges against Columbia and the Community Education Exchange Program (CEEP) director Shirle Brown and reiterating a demand that Mr. Brown be fired.

## Change in Priorities Dooms Pharmacy Site Housing Plan

(Continued from Page 1)  
personnel—not students.

Indeed, the composition of the university-affiliated portion of the site's residents was an attempt to defuse potential community opposition to the project. As these residents would not be transient upper-middle class students but low-income employees likely to become permanent community residents, it was more difficult to portray the project as evidence of an undesirable expansion or as an attempt to drive the middle class out of Morningside Heights.

The President's statement, thus, appears to represent an effort to pave the way for a conversion of the Pharmacy Site from community to student use.

However, it is clear that the shift in plans for the Pharmacy Site will be a slow one, probably dragged

out over many months. As Dr. McGill has acknowledged, "in view of the background of the matter I can't take that step (converting the site to student housing) without exhausting all other opportunities."

The university, thus, appears to be planning a lengthy period in which it will still seek federal funding for the original plan, while slowly disengaging itself from its commitment to build a university-community facility.

Dr. McGill insists that he will "exhaust" all opportunities for securing funds for community housing, and the members of the committee on east campus housing have indicated that it is unlikely that student housing will soon rise on the site.

According to Assistant Vice President for Administration Glen Waggoner, "our primary interest will be in other sites although we will not exclude that area from consideration."

With the decline in community activism, and the end of the student-community alliance which marked the late 1960's and early 1970's, it appears that the old Pharmacy Site is now more moribund than "live."

The pressure on the university from the community and its student supporters has abated, and students have demonstrated an in-
